# Annual Index

VOLUME VII

January . . . . . 1-106
April . . . . . 107-226
July . . . . . 227-350
October . . . . . 351-478

Abu-Ayyash, A. Y., review of *Urban Geography: A Social Perspective*, 103-5

Adejuwon, O., A Note on the Comparison of Chorochromatic Surfaces, 435-40

Agnew, John A., review of *Impact of Uncertainty on Location*, 213-15

Algorithm for the *p*-Median Problem with Maximum Distance Constraints: Extension and Reply, Basheer M. Khumawala, 91-95

Analyzing Multiple Alternative Dependent Variables, Neil Wrigley, 187-95

Approach to Trading Off Economic and Environmental Values in Industrial Land-Use Planning, An, R. M. Davis, C. S. Stacey, G. I. Nehman and F. K. Goodman, 397-410

Armstrong, Regina Belz, and Boris Pushkarev, *The Office Industry: Patterns of Growth and Location*, review, 460-63

Arnfield, John A., reviews of *Atmospheric Pollution, Climate in Review*, and *Understanding Our Atmospheric Environment*, 221-25

Assessment of the Action Component of Action Space, An, Gary Higgs, 35-50

Astrachan, E. *See* Royaltey, H. H.

*Atmospheric Pollution*, review, 221-25

Bach, Wilfred, *Atmospheric Pollution*, review, 221-25

Beavon, Keith S. O., and Alan S. Mabin, The Lösch System of Market Areas: Derivation and Extension, 131-51

Bell, Thomas L., review of *Image and Environment: Cognitive Mapping and Spatial Behavior*, 344-47

Betak, John F., The Conceptual Locus of a Two-Dimensional Language: Some Implications for Human Responses to Two-Dimensional Displays, 1-17; Syntactic and Subjective Complexity: A Simple Test of a Two-dimensional Language Model, 285-93

Blumner, Sidney M., and Vaughn M. Johnson, The Effects of Selected Variables on Housing Values in Pomona, California, 303-10

Bonner, W. D. *See* Neiburger, Morris

Books Received, 466-70

Book Reviews, 102-6, 213-25, 341-49, 460-65. *See also listings by title, author, reviewer*

Burnett, Pat, The Dimensions of Alternatives in Spatial Choice Processes: A Reply, 327-33

Burt, James E., and Gary L. Gaile, review of *Statistics of Directional Data*, 341-44

Charnes, Abraham, Kingsley E. Haynes, Jared E. Hazleton, and Michael J. Ryan, A Hierarchical Goal-Programming Approach to Environmental Land Use Management, 121-30

Chatterji, Manas, review of *Spatial Autocorrelation*, 463-65

Church, Richard. *See* ReVelle, Charles

*City, The: Problems of Planning*, review, 105-6

Cliff, A. D., and J. K. Ord, *Spatial Autocorrelation*, review, 463-65

# INSTRUCTIONS TO CONTRIBUTORS

Manuscripts submitted for publication in *Geographical Analysis* must be in the English language, typewritten, double-spaced, on one side only of white bond paper, 8-1/2 X 11 inches in size. They should have wide margins all around, especially on the left-hand side to allow for editorial notations.

*Abstract.* An abstract, double-spaced, of 100 to 150 words, must accompany the article. It should summarize the main points of the paper, in brief.

*Literature Cited.* All works cited should be listed alphabetically by author, last name first, in a numbered list, double-spaced, at the end of the manuscript. Data must include the author's full name, title of the work, and (in the case of books) the place of publication, publisher, and date, or (in the case of articles) the periodical, volume number, date and inclusive pages. Citations should be by bracketed number corresponding to the list and (where called for) page or similar reference (e.g., "see Smith [1, 3]" or "as in Smith [1, pp. 7-10; 2, p. 6]").

*Footnotes.* Footnotes should not be used for the purpose of citation, but may be used for comments, explanations, and the like, not suited to the text. Their length should be kept to a minimum. Footnotes should be double-spaced, at the end of the manuscript and not at the foot of the page. Acknowledgments should be indicated by an asterisk to the title.

*Illustrations.* Illustrations must be of professional quality, ready for reproduction, executed on white paper or vellum, in black ink, with clear, black lines and figures. Illustrations should be capable of legible reduction to a size of no more than 4-1/2 by 7 inches; they should be numbered consecutively, and the number and author's name should be penciled lightly on the back of each. All illustrations must have captions, which should be typed, double-spaced, on a sheet at the end of the manuscript.

*Authors' Biographies.* Authors should supply their rank, department, and the name of the institution with which they are affiliated.

*Mathematics.* Equations should be typed and displayed equations identified by consecutive arabic numbers in parenthesis on the right. Expressions should be aligned and subscripts and superscripts clearly marked (e.g., $X_{ij}^{kl}$ [double subscript], $X_{ij}^{kl}$ [subscript to subscript]). Greek letters should be used only when necessary, and the exact form (upper or lowercase) indicated by the author. Authors must also distinguish among: the number one and lower-case l; capital and lower-case letters; zero and capital O; the letters eta ($\eta$) and n; nu ($\nu$) and v; partial differential ($\partial$) and lowercase delta ($\delta$); X and the multiplication sign.

In order to avoid repetition, a long expression occurring several times can be replaced by a symbol. The slash (/) should be used to separate the numerator and denominator of in-text fractions and short displayed fractions; complex, displayed fractions may be built-up. Negative powers should be used in complex expressions when they will serve as compound fractions. Multiple dots and bars over expressions should be avoided where primes can be used.

*Tables.* Tables should be numbered consecutively throughout the article. Each table should be typed on separate sheets at the end of the manuscript. The sequence of footnotes to tables is *, †, ‡, §, ‖, **, ††, etc.
